P100 Learning.ppt

1

What We Will Cover in This Section

- Overview.
- Sensory learning.
- Classical conditioning.
- Operant conditioning.
- Social learning.

10/3/2002

P100 Learning.ppt

2

What Is Learning?

The relatively permanent change in behavior or knowledge due to experience or practice.

$$\mathbf{B = f(P :: E)}$$

10/3/2002

P100 Learning.ppt

3

Sensory Learning

- **Habituation.**
Learning not to respond to the repeated exposure to some stimulus.
- **Sensitization.**
Learning to attend or respond to some stimulus after becoming aware of it.

10/3/2002

P100 Learning.doc

4

Classical Conditioning

10/3/2002

P100 Learning.doc

5

What Is It?

A kind of learning that occurs when

- a neutral stimulus (A) becomes so strongly associated with another stimulus(B) that causes a reflexive behavior
- that A alone causes that behavior.

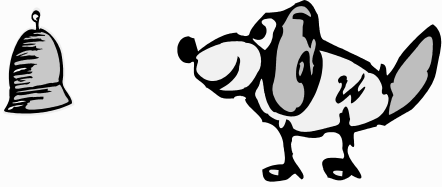

10/3/2002

P100 Learning.doc

6

Natural Behavior

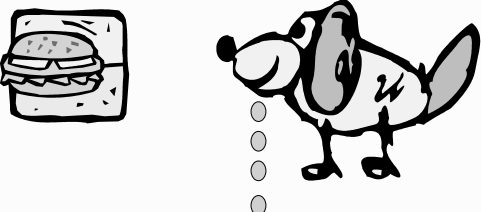

Neutral Stimulus

10/3/2002 P100 Learning.ppt 7

Natural Behavior

Unconditioned Stimulus Unconditioned Response

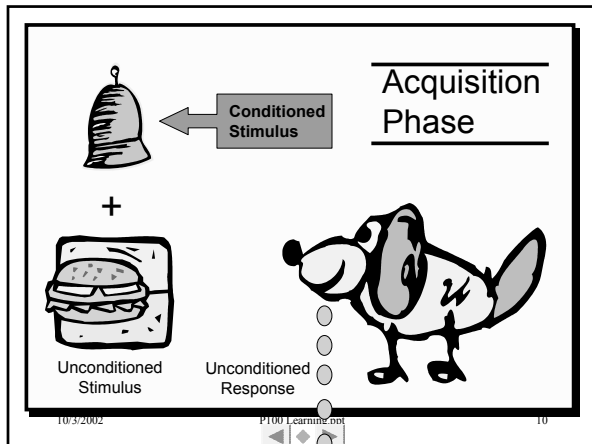

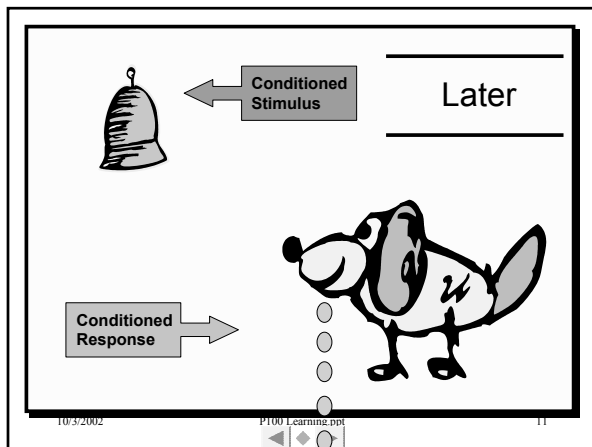

10/3/2002 P100 Learning.ppt 8

Terms #1

- **Unconditioned Response (UCR)**
A reflexive or involuntary reaction elicited by some external stimulus.
- **Unconditioned Stimulus (UCS)**
A stimulus that elicits an innate, involuntary behavior or response without requiring prior learning.

10/3/2002 P100 Learning.ppt 9

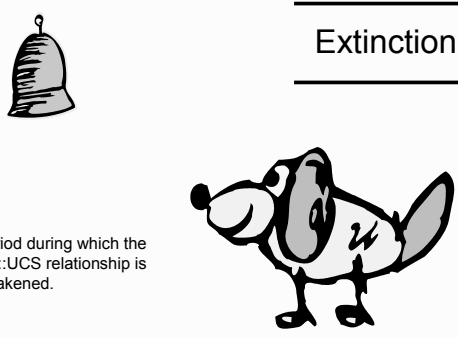

Terms #2

- **Conditioned Stimulus (CS)**
A previously neutral stimulus that elicits an involuntary response.
- **Conditioned Response (CR)**
An involuntary (reflexive) elicited by some previously neutral stimulus.

10/3/2002 P100 Learning dot 12

Extinction

Period during which the CS::UCS relationship is weakened.

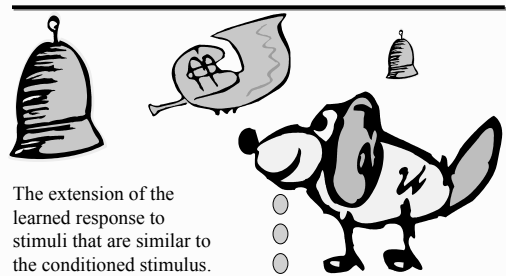

10/3/2002 P100 Learning.doc 13

Terms #3

- **Acquisition**
The learning period during which the CS-UCS relationship is learned with the formation of the Conditioned Response.
- **Extinction**
The weakening or disappearance of a Conditioned Response.

10/3/2002 P100 Learning.doc 14

Stimulus Generalization

The extension of the learned response to stimuli that are similar to the conditioned stimulus.

10/3/2002 P100 Learning.doc 15

Stimulus Discrimination

A change in responses to one stimulus but not to stimuli that are similar.

10/3/2002

P100 Learning.doc

16

CS : UCS Arrangements

Forward Conditioning

The CS (tone) precedes the UCS (shock).

10/3/2002

P100 Learning.doc

17

CS : UCS Arrangements

Simultaneous Conditioning

The CS (tone) and the UCS (shock) come and go at the same time.

10/3/2002

P100 Learning.doc

18

CS : UCS Arrangements

Backward Conditioning

The UCS (shock) precedes the CS (tone).

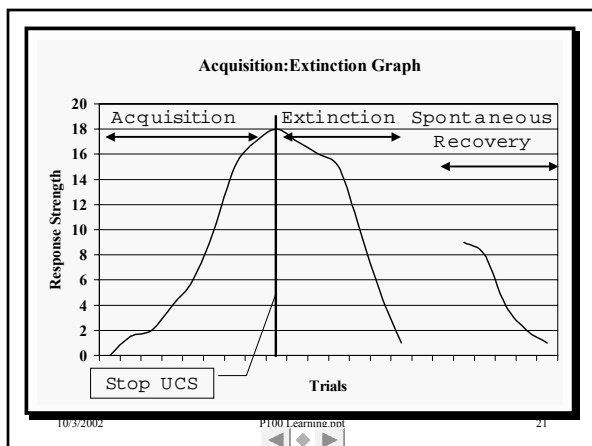

The diagram shows a horizontal timeline labeled 'Time' with an arrow pointing right. A box labeled 'UCS' with a lightning bolt icon is positioned to the left of a box labeled 'CS' with a musical note icon. This indicates that the unconditioned stimulus occurs before the conditioned stimulus.

10/3/2002 P100 Learning.doc 19

Five Conditions that Influence Acquisition

1. The CS has to be **strong** and **distinctive**.
2. The **CS should precede the UCS** for strongest conditioning.
3. The CS and UCS should occur **close together**.
4. The **frequency** of the CS-UCS pairings is important.
5. The **time interval** between the pairings is important.

10/3/2002 P100 Learning.doc 20

Classical Conditioning: So What?

- **Clinical Psychology.**
 - Phobias.
 - Watson and Little Albert study.
- **Advertising.**
 - Sex and product.
- **Aversion conditioning.**
 - Coyotes and sheep.

10/3/2002

P100 Learning.doc

22

Learning Phobias, Part 1

10/3/2002

P100 Learning.doc

23

Learning Phobias, Part 2

10/3/2002

P100 Learning.doc

24

Learning Phobias, Part 3

10/3/2002

P100 Learning.doc

25

Key Characteristics

- Learned behavior (*Conditioned Response*) is involuntary.
- During learning the triggering stimulus (*Unconditioned Stimulus*) usually occurs *before* the learned behavior.

10/3/2002

P100 Learning.doc

26

Issue

- Are some responses innate?
 - Fear of heights?
 - Fear of the dark?
 - Pleasure at seeing a nude body?
- If so, what survival value might these have?

10/3/2002

P100 Learning.doc

27

Operant Conditioning

10/3/2002

P100 Learning.doc

28

Overview

- Grew out of reaction to 'hidden events' in psychoanalysis.
- We cannot see what goes on inside the 'black box'.
- Empirically based.
- Focused on individual learning.
- All behavior is acquired through experience.

10/3/2002

P100 Learning.doc

29

Thorndike: Law of Effect

Any behavior that is followed by reinforcement is strengthened.

10/3/2002

P100 Learning.doc

30

Key Characteristics

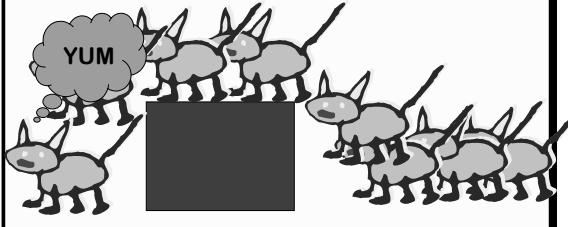

- Focuses on voluntary behavior.
- Learned behavior is controlled by its consequences.
 - Get good things.
- Minimize bad things.

10/3/2002
P100 Learning dot
31

Positive Reinforcement

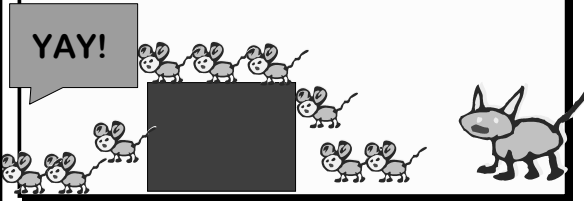

Behavior that gets something you want.

10/3/2002
P100 Learning dot
32

Negative Reinforcement

Behavior that removes something you don't want.

10/3/2002
P100 Learning dot
33

Operant Conditioning Terms #1

- **Discriminative Stimulus.**
A cue that lets you know that a specific response will lead to the expected reinforcement.
- **Positive Reinforcement.**
A process in which a reward following a behavior is used to increase or strengthen that behavior.
- **Negative Reinforcement.**
A process in which a response which prevents an aversive event is strengthened.

10/3/2002

P100 Learning.doc

34

Punishment

- **Removal of something liked or presentation of something disliked.**
 - Generally leads to suppression of behavior.
 - Does **NOT** lead to forgetting (extinction).
 - Examples.
 - Speeding tickets.
 - Time outs.

10/3/2002

P100 Learning.doc

35

Spare the Rod and Spoil the Child?

10/3/2002

P100 Learning.doc

36

When Punishment Works

1. It is swift and brief.
2. Administered immediately after the undesirable behavior.
3. Is limited in intensity.
4. Is response to behavior and not personality.
5. Limited to the situation where the undesirable behavior occurs.
6. Consists of penalties, not pain.

10/3/2002 P100 Learning.doc 37

QUESTION

Identify the types of reinforcement for each of the following situations.

- Positive.
- Negative.
- Punishment.

- Complementing someone for good work.
- Getting up to let a dog out of the house because he is whimpering.
- The dog whimpers to get let out of the house.
- You get a speeding ticket.

10/3/2002 P100 Learning.doc 38

Other Elements #1

- **Extinction.**
The weakening or disappearance of a response because it is no longer followed by a reinforcer.
- **Discriminative Stimulus.**
Stimuli that act as predictors of reinforcement, signaling when particular behaviors will result in reinforcement.

10/3/2002 P100 Learning.doc 39

Learning Complex Behavior

- **Shaping**
Learning a complex behavior by reinforcing closer and closer approximations to the desired behavior.
- **Chaining**
Linking small behavioral steps to achieve the desired behavior.

10/3/2002 P100 Learning.ppt 40

Types of Reinforcers

- **Primary Reinforcer**
 - *Reinforcers that are related to basic survival.*
 - Food
 - Water
 - Sex
- **Secondary Reinforcer**
 - *Reinforcers that get their value through association with a primary reinforcer.*
 - Money
 - Grades

10/3/2002 P100 Learning.ppt 41

Reinforcement Schedules

- **The pattern of delivering or withholding reinforcers.**
 - **Continuous**
Every appropriate response is reinforced.
 - **Variable**
Reinforcement is not given after every desired response.

10/3/2002 P100 Learning.ppt 42

Types of Reinforcement Schedules

	Fixed	Variable
Ratio <i>After number of responses</i>	Reinforcer is given after a fixed number of correct responses .	Reinforcer is given after an intermittent number of correct responses .
Interval <i>After a period of time.</i>	Reinforcer is made available after a fixed time period .	Reinforcer is made available after an intermittent time period .

10/3/2002

P100 Learning.doc

43

Effects of Reinforcement Schedules

- **Continuous**
 - Leads to fast acquisition.
 - Fast extinction.
- **Fixed ratio.**
 - Response rate is fast and regular.
 - Resistant to extinction.
- **Variable ratio.**
 - Response rate is regular and high.
 - Resistant to extinction.
- **Fixed Interval.**
 - Response drops after reinforcement then increases at the end of the interval.
 - Moderately resistant to extinction.
- **Variable interval.**
 - Response rate is slow and regular.
 - Very resistant to extinction.

10/3/2002

P100 Learning.doc

44

QUESTION

How would you train your dog to bring your slippers from the bedroom to you on the couch.

- Discriminative Stimulus?
- Reinforcement schedules?

10/3/2002

P100 Learning.doc

45

Operant Conditioning: So What?

- **Teaching.**
 - When to give feedback.
 - What kinds of feedback to give.
- **Clinical psychology.**
 - Learned helplessness.
 - Aggression.

10/3/2002 P100 Learning.doc 46

Operant Conditioning: Issues

- **Latent learning.**
Learning that is not apparent until there is a need for it.
- **Instinctive Drift.**
Tendency for learned behavior to drift toward instinctual behavior over time.
- **Insight.**
Kohler's experiments with Sultan.

10/3/2002 P100 Learning.doc 47

Animal Cognition

- **Cognitive maps.**
A mental representation of physical space.

10/3/2002 P100 Learning.doc 48

Observational Learning

10/3/2002

P100 Learning.doc

49

What is It?

Learning that occurs when our behavior is influenced by the actions of others called models.

10/3/2002

P100 Learning.doc

50

QUESTION

Who are the most influential models in your life?

10/3/2002

P100 Learning.doc

51

Key Factors in Observational Learning

1. **Attention.**
We have to focus on what the model did.
2. **Retention.**
We have to remember what the model did.
3. **Production.**
We have to have the skills to do what the model did.
4. **Motivation.**
Will I be reinforced for this behavior?

10/3/2002

P100 Learning.doc

52

Observational Learning: So What?

- **Media.**
 - Violence.
 - Sex.
- **Parenting.**
 - 'Do as I say not as I do.'
- **Training.**
 - Positive models.

10/3/2002

P100 Learning.doc

53

Learning Summary

Type of Learning	Procedure	Result
Classical Conditioning	Neutral stimulus is <i>paired</i> with an unconditioned stimulus.	Neutral stimulus becomes conditioned (learned) and elicits the conditioned response.
Operant Conditioning	Behavior is <i>followed</i> by a consequence (pleasant or unpleasant).	The behavior increases or decreases in frequency.
Observational Learning	An observer <i>watches</i> a model to learn a behavior.	The observer learns behaviors and imitates them.
