

# Psychological Statistics

## Introduction

---

---

---

---

---

---

---

---

## What We Will Cover in This Section

- Course requirements.
- Introduction.
- Research designs.
- Variables.
- Numbers.

---

---

---

---

---

---

---

---

## Course Requirements

- Text
  - Heiman
- Study Guide
- Assignments
- Pocket calculator
- SPSS
- Attendance
- Contacting me.

---

---

---

---

---

---

---

---

## Evaluation

- Frequent quizzes.
- Occasional homework problems in the study guide.
- No final examination.
- No extra credit.

---

---

---

---

---

---

---

---

## Course Web Site

- Syllabus.
- How to contact me.
- PowerPoint slides.
- Interesting sites.
- Pictures of me.

---

---

---

---

---

---

---

---

## Approach to the Course

- Theory.
- How computations are done.
- Interpretation.
- Assumptions.

---

---

---

---

---

---

---

---

**WARNING!**

**Miss a Class**

8/26/2003 P225 Introduction 7

---

---

---

---

---

---

---

---

**Major Goal of the Course**

Give you the basic knowledge to understand basic psychological statistics.

8/26/2003 P225 Introduction 8

---

---

---

---

---

---

---

---

**Basic Terms and Concepts**

8/26/2003 P225 Introduction 9

---

---

---

---

---

---

---

---

## Basic Terminology

### STATISTICS

*Numerical techniques for describing groups of people or events.*

---

---

---

---

---

---

---

---

## Fundamental Uses

### DESCRIPTIVE STATISTICS

*Techniques used to organize, summarize, and describe sets of numbers.*

### INFERENCE STATISTICS

*Techniques that allow us to make estimates about populations based on sample data.*

---

---

---

---

---

---

---

---

## Population

*All members of a group that are alike on at least one characteristic.*

### PARAMETER

*Symbol used to indicate the properties of a population.*

In statistics, parameters are expressed in Greek letters ( $\mu, \sigma$ ).

---

---

---

---

---

---

---

---

## Sample

*A group that is less than the total population from which it is drawn.*

### STATISTIC

*Symbol used to indicate the properties of a sample.*

Statistics are expressed in Roman letters (M, S, r).

---

---

---

---

---

---

---

---

## Sample Types

### REPRESENTATIVE SAMPLE

*Sample that is selected in such a way that its characteristics accurately reflect the population from which it was drawn.*

### RANDOM SAMPLE

*Method of selecting a sample so that each member of the population has an equal chance of being selected.*

---

---

---

---

---

---

---

---

## Variables

---

---

---

---

---

---

---

---

## Experimental Variables

- Independent variable.
  - The treatment or condition that is manipulated by an experimenter.
- Dependent variable.
  - The variable that is measured in an experiment.

---

---

---

---

---

---

---

---

## Measurement Variables

### DISCRETE VARIABLE

*A variable that can take on only whole values.*

Example: Number of toes or number of cars you have.

### CONTINUOUS VARIABLE

*A variable that can take on fractional values.*

Example: Speedometer reading, height.

---

---

---

---

---

---

## Using Numbers

3.14159

8/26/2003

P225 Introduction

18

---

---

---

---

---

---

---

---

## Levels of Measurement

### NOMINAL SCALE

*Numbers are used as labels.*

### ORDINAL SCALE

*Numbers are used to indicate rank order.*

---

---

---

---

---

---

---

---

## Levels of Measurement

### INTERVAL SCALE

*Numbers are used to indicate an actual amount and there is an equal unit of measurement between adjacent numbers.*

### RATIO SCALE

*Numbers indicate an actual amount and there is a true zero.*

---

---

---

---

---

---

---

---

The End

---

---

---

---

---

---

---

---
