

Inferential Statistics

Non-parametric Statistics

What We Will Cover in This Section

- Introduction
- Correlational Techniques
 - Spearman
 - Point Biserial
- Chi Square

What Is/Are It?

Statistical techniques applied to a set of variables when one cannot assume that the data are normally distributed or the data do not meet the requirements for an interval scale.

Correlational Techniques

| Technique | Variable 1 | Variable 2 |
|--------------------------------|-------------------|--------------|
| Spearman Correlation (r_s) | Ordinal data | Ordinal data |
| Point Biserial (r_{pb}) | Interval or Ratio | Dichotomous |

4/30/2006

P331 Non-parametric statistics

4

Spearman Correlation (r_s)

- The Null Hypothesis is
 $H_0: \rho_s = 0$
- The Alternative Hypothesis is
 $H_1: \rho_s \neq 0$

4/30/2006

P331 Non-parametric statistics

5

When Used

1. Both sets of data are ordinal.
or...
2. One set is interval/ratio and the other is ordinal.
or...
3. The data are interval or ratio but are **not** normally distributed.

4/30/2006

P331 Non-parametric statistics

6

Spearman Correlation Example

A researcher wanted to know if there was a relationship between leadership skill and aggressiveness. The investigator first had ten supervisors rank ordered on their leadership skill, and then had them rank ordered on their aggressiveness.

4/30/2006

P331 Nonparametric statistics

7

Spearman Correlation Example

| Subject | R _{agg} | R _{lead} | d | d ² |
|---------|------------------|-------------------|---|----------------|
| 1 | 2 | 3 | 1 | 1 |
| 2 | 3 | 1 | 2 | 4 |
| 3 | 7 | 5 | 2 | 4 |
| 4 | 6 | 9 | 3 | 9 |
| 5 | 1 | 2 | 1 | 1 |
| 6 | 5 | 6 | 1 | 1 |
| 7 | 10 | 8 | 2 | 4 |
| 8 | 8 | 10 | 2 | 4 |
| 9 | 9 | 7 | 2 | 4 |
| 10 | 4 | 4 | 0 | 0 |

4/30/2006

P331 Nonparametric statistics

8

Formula and Computation

$$r_s = 1 - \frac{6(\sum d^2)}{N(N^2 - 1)} \quad r_s = 1 - \frac{6(32)}{10(100 - 1)}$$

$$r_s = 1 - \frac{192}{990}$$

$$r_s = .806$$

4/30/2006

P331 Nonparametric statistics

9

Assumptions

1. The sample has been randomly selected from the population.
2. The relationship between the variables is linear.

4/30/2006

P331 Non-parametric statistics

10

Kool Facts Regarding r_s

1. Given no tied ranks r_s and r give the same result.
2. Pearson r is more sensitive.
3. Pearson r is a more powerful statistic.

4/30/2006

P331 Non-parametric statistics

11

Point-Biserial (r_{pb})

- Used when
 - One variable is ordinal, interval, or ratio.
 - The second variable has only two values.
- The Null Hypothesis is
$$H_0: \rho_{pb} = 0$$
- The Alternative Hypothesis is
$$H_1: \rho_{pb} \neq 0$$

4/30/2006

P331 Non-parametric statistics

12

Examples of r_{pb}

- You want to correlate gender to GPA.
- You want to correlated drivers training to number of traffic accidents.
- You want to correlate marital status to depression.

4/30/2006

P331 Non-parametric statistics

13

Example

Z.Z. Bottoms wanted to know if there were differences in attitudes toward rap-country-soul music. Z. Z. got a group of eight volunteers and divided them into two groups: those under 30 years old and those over 30 years old. Bottoms then had them rate their feelings about the music.

These data are summarized on the following page.

4/30/2006

P331 Non-parametric statistics

14

Summary

| Attitude | Age Group | Age Category |
|----------|-----------|--------------|
| 5 | Over 30 | 0 |
| 0 | Under 30 | 1 |
| 4 | Over 30 | 0 |
| 1 | Over 30 | 0 |
| 1 | Under 30 | 1 |
| 2 | Over 30 | 0 |
| 3 | Under 30 | 1 |
| 0 | Under 30 | 1 |

4/30/2006

P331 Non-parametric statistics

15

Age Group by Evaluation ($r_{pb} = -.577$)

4/30/2006

P331 Non-parametric statistics

16

Kool Facts Regarding r_{pb}

- When the dichotomous variable is coded 0 and 1, r_{pb} is equal to the Pearson r .
- Point-biserial and t-test are closely related.
 - r_{pb} looks at strength and uses all data.
 - t looks at differences between means.

4/30/2006

P331 Non-parametric statistics

17

Chi-Square (χ^2)

4/30/2006

P331 Non-parametric statistics

18

One Way Chi-Square (χ^2) Goodness of Fit

- One group.
 - Group is grouped categorically (nominal scale).
- Null hypothesis.
 - There is no difference in the distribution of the scores across the group.
- Alternative hypothesis.
 - There is a difference in the scores across the group.

4/30/2006

P331 Non-parametric statistics

19

Chi-square Example

The noted statistician, Dr. Anne Nova, was interested in academic preferences. She got a sample of 100 students and asked them to select the school activity they liked best from the following list.

Statistics
Psychological Testing
Experimental Psychology
Recess

4/30/2006

P331 Non-parametric statistics

20

Hypotheses

- If there is no specific prediction.
 - Null Hypothesis.
 $H_0: f_{\text{stat}} = f_{\text{experimental}} = f_{\text{testing}} = f_{\text{recess}}$
 - Alternative Hypothesis.
 $H_A: f_{\text{stat}} \neq f_{\text{experimental}} \neq f_{\text{testing}} \neq f_{\text{recess}}$
- Note: The researcher may specify the proportion of cases in H_A .

4/30/2006

P331 Non-parametric statistics

21

Results

| | Statistics | Experimental | Testing | Recess |
|-----------------------------|------------|--------------|---------|--------|
| f_e | 25 | 25 | 25 | 25 |
| f_o | 40 | 30 | 20 | 10 |
| $f_o - f_e$ | 15 | 5 | -5 | -15 |
| $(f_o - f_e)^2$ | 225 | 25 | 25 | 225 |
| $\frac{(f_o - f_e)^2}{f_e}$ | 9 | 1 | 1 | 9 |

225/25

Nonparametric statistics

22

Chi-Square Evaluation

$$\chi^2 = \sum \left(\frac{(f_o - f_e)^2}{f_e} \right)$$

$$\chi^2 = 20$$

Degrees of freedom = k-1

Critical value (page 490)

$$\chi^2_{crit} = 7.81, p < .05$$

4/30/2006

Nonparametric statistics

23

Two-Way Chi-Square Test of Independence

- Two variables.
 - People are grouped categorically (nominal scale).
- Null hypothesis.
 - There is no difference in the distribution of the scores across the variables.
- Alternative hypothesis.
 - There is a difference in the distribution of the scores across the variables.

4/30/2006

Nonparametric statistics

24

Chi-Square (r x c) Example

The noted statistician, Dr. Polly Nomial, wanted to repeat Anne Nova's study but was interested if there was an effect on the basis of gender. So she asked a sample of students to select their preference for academic activity then broke the group into male and female respondents.

4/30/2006

P331 Nonparametric statistics

25

Nomial's Data

| | Statistics | Experimental | Testing | Recess | Total |
|--------|------------|--------------|---------|--------|-------|
| Male | 15 | 10 | 10 | 15 | 50 |
| Female | 20 | 10 | 5 | 5 | 40 |
| | 35 | 20 | 15 | 20 | 90 |

4/30/2006

P331 Nonparametric statistics

26

1. Compute the expected values.

| | Statistics | Experimental | Testing | Recess | Total |
|--------|---------------------|---------------------|--------------------|---------------------|-------|
| Male | 15 $f_e = 19.44$ | 10 $f_e = 11.11$ | 10 $f_e = 8.33$ | 15 $f_e = 11.11$ | 50 |
| Female | 20 $f_e = 15.56$ | 10 $f_e = 8.89$ | 5 $f_e = 6.67$ | 5 $f_e = 8.89$ | 40 |
| | 35 | 20 | 15 | 20 | 90 |

$$f_e = \frac{\text{Row Total} \times \text{Column Total}}{\text{Grand Total}}$$

4/30/2006

P331 Nonparametric statistics

27

2. Compute $(f_e - f_o)^2$

| | Statistics | Experimental | Testing | Recess | Total |
|--------|--|---|--|--|-------|
| Male | 15 $f_e=19.44$ $(f_e-f_o)^2=19.71$ | 10 $f_e=11.11$ $(f_e-f_o)^2=1.21$ | 10 $f_e=8.33$ $(f_e-f_o)^2=2.79$ | 15 $f_e=11.11$ $(f_e-f_o)^2=15.13$ | 50 |
| Female | 20 $f_e=15.56$ $(f_e-f_o)^2=19.71$ | 10 $f_e=8.89$ $(f_e-f_o)^2=1.23$ | 5 $f_e=6.67$ $(f_e-f_o)^2=2.79$ | 5 $f_e=8.89$ $(f_e-f_o)^2=15.13$ | 40 |
| | 35 | 20 | 15 | 20 | 90 |

4/30/2006

P331 Nonparametric statistics

28

3. Compute $\frac{(f_e - f_o)^2}{f_e}$

| | Statistics | Experimental | Testing | Recess | Total |
|--------|---|---|--|---|-------|
| Male | 15 $f_e=19.44$ $(f_e-f_o)^2=19.71$ 1.014 | 10 $f_e=11.11$ $(f_e-f_o)^2=1.21$.109 | 10 $f_e=8.33$ $(f_e-f_o)^2=2.79$.335 | 15 $f_e=11.11$ $(f_e-f_o)^2=15.13$ 1.362 | 50 |
| Female | 20 $f_e=15.56$ $(f_e-f_o)^2=19.71$ 1.267 | 10 $f_e=8.89$ $(f_e-f_o)^2=1.23$.138 | 5 $f_e=6.67$ $(f_e-f_o)^2=2.79$.418 | 5 $f_e=8.89$ $(f_e-f_o)^2=15.13$ 1.702 | 40 |
| | 35 | 20 | 15 | 20 | 90 |

4/30/2006

P331 Nonparametric statistics

29

4. Compute $\chi^2 = \Sigma \left(\frac{(f_e - f_o)^2}{f_e} \right)$

$$\chi^2 = 6.363$$

$$df = (r-1)(c-1)$$

What is the critical value?

What is your conclusion?

4/30/2006

P331 Nonparametric statistics

30

Kool Facts About Chi-Square

- χ^2 values range from a low of 0, no difference, to higher values as the difference between f_o and f_e become larger.
- Degrees of freedom are based on the number of cells, not number of people.
- For complex contingency tables χ^2 does not indicate which cells are highly different. *Post hoc* tests have to be done to identify the differences.
- χ^2 does not give an indication as to how strong a relationship is.

4/30/2006

P331 Non-parametric statistics

31

5 x 4 Contingency Table

| | | | | |
|-------------|-------------|-------------|-------------|-------------|
| Light Green | Light Green | Light Green | Light Green | Light Green |
| Light Green | Light Green | Light Green | Light Green | Light Green |
| Light Green | Light Green | Light Red | Light Red | Light Red |
| Light Green | Light Green | Dark Red | Dark Red | Dark Red |

4/30/2006

P331 Non-parametric statistics

32

Types of Chi-square

1. *Goodness of fit* (One way).
 - Single variable with multiple categories.
 - Preference for car models.
 - Choice of computer models.
 - Compares the distribution of scores against a standard.
 - Equal distribution of scores.
 - A priori distribution of scores.
 - Similar to the One-way ANOVA.

4/30/2006

P331 Non-parametric statistics

33

Types of Chi-square

2. *Test of Independence* (Independent Samples)

- Two or more variables.
 - School dropouts by ethnic group.
 - Gender of rider by order of finish in a horse race.
- Similar to factorial ANOVA.

4/30/2006

P331 Nonparametric statistics

34

χ^2 Assumptions

1. The observations are independent; each observed frequency is generated by a different subject.
2. The observed cell frequencies are greater than 5.

4/30/2006

P331 Nonparametric statistics

35

THE END!!!!

4/30/2006

P331 Nonparametric statistics

36

Thank God!
Its all over.

A close-up photograph of a pig's face, showing its eyes and snout. The pig appears to be in a state of relief or exhaustion. A green speech bubble is overlaid on the left side of the image, containing the text "Thank God! Its all over." The entire image is framed by a blue border. At the bottom left of the frame, there is a small red circle. At the bottom center, there are three small navigation icons: a left-pointing triangle, a diamond, and a right-pointing triangle. At the bottom right, there is a small number "37".
