## Non-parametric Statistics

12/9/2005

P766 Non-parametric statistics

1

---

---

---

---

---

---

---

---

## What We Will Cover in This Section

- Introduction
- Correlational Techniques
  - Spearman
  - Point Biserial
  - Phi Coefficient
- Chi Square

12/9/2005

P766 Non-parametric statistics

2

---

---

---

---

---

---

---

---

## What Is/Are It?

Statistical techniques applied to a set of variables when one cannot assume that the data are normally distributed or the data do not meet the requirements for an interval scale.

12/9/2005

P766 Non-parametric statistics

3

---

---

---

---

---

---

---

---

## Correlational Techniques

Technique	Variable 1	Variable 2
Spearman Correlation ( $r_s$ )	Ordinal data	Ordinal data
Point Biserial ( $r_{pb}$ )	Interval or Ratio	Dichotomous
Phi Coefficient ( $\phi$ )	Dichotomous	Dichotomous

12/9/2005

P766 Nonparametric statistics

4

---

---

---

---

---

---

---

---

---

---

## Spearman Correlation ( $r_s$ )

- The Null Hypothesis is  
 $H_0: \rho_s = 0$
- The Alternative Hypothesis is  
 $H_1: \rho_s \neq 0$

12/9/2005

P766 Nonparametric statistics

5

---

---

---

---

---

---

---

---

---

---

## Spearman Correlation Example

A researcher wanted to know if there was a relationship between leadership skill and aggressiveness. The investigator first had ten supervisors rank ordered on their leadership skill, then had them rank ordered on their aggressiveness.

12/9/2005

P766 Nonparametric statistics

6

---

---

---

---

---

---

---

---

---

---

## Spearman Correlation Example

Subject	R <sub>egg</sub>	R <sub>lead</sub>	d	d <sup>2</sup>
1	2	3	1	1
2	3	1	2	4
3	7	5	2	4
4	6	9	3	9
5	1	2	1	1
6	5	6	1	1
7	10	8	2	4
8	8	10	2	4
9	9	7	2	4
10	4	4	0	0

12/9/2005

P766 Nonparametric statistics

7

---

---

---

---

---

---

---

---

---

---

## Formula and Computation

$$r_s = 1 - \frac{6(\sum d^2)}{N(N^2 - 1)} \quad r_s = 1 - \frac{6(32)}{10(100 - 1)}$$

$$r_s = 1 - \frac{192}{990}$$

$$r_s = .806$$

12/9/2005

P766 Nonparametric statistics

8

---

---

---

---

---

---

---

---

---

---

## When Used

- Both sets of data are ordinal.  
or...
- One set is interval/ratio and the other is ordinal.  
or...
- The data are interval or ratio but are not normally distributed.

12/9/2005

P766 Nonparametric statistics

9

---

---

---

---

---

---

---

---

---

---

## Assumptions

1. The sample has been randomly selected from the population.
2. The relationship between the variables is linear.

12/9/2005

P766 Non-parametric statistics

10

---

---

---

---

---

---

---

---

---

---

## Kool Facts Regarding $r_s$

1. Given no tied ranks  $r_s$  and  $r$  give the same result.
2. Pearson  $r$  is more sensitive.
3. Pearson  $r$  is a more powerful statistic.

12/9/2005

P766 Non-parametric statistics

11

---

---

---

---

---

---

---

---

---

---

## Point-Biserial ( $r_{pb}$ )

- Used when
  - One variable is ordinal or interval
  - The second variable has only two values.
- The Null Hypothesis is
$$H_0: \rho_{pb} = 0$$
- The Alternative Hypothesis is
$$H_1: \rho_{pb} \neq 0$$

12/9/2005

P766 Non-parametric statistics

12

---

---

---

---

---

---

---

---

---

---

## Examples of $r_{pb}$

- You want to correlate gender to GPA.
- You want to correlated drivers training to number of traffic accidents.
- You want to correlate marital status to depression.

12/9/2005

P766 Nonparametric statistics

13

---

---

---

---

---

---

---

---

---

---

## Example

Z.Z. Bottoms wanted to know if there were differences in attitudes toward rap-country-soul music. Z. Z. got a group of eight volunteers and divided them into two groups: those under 30 years old and those over 30 years old. Bottoms then had them rate their feelings about the music.

These data are summarized on the following page.

12/9/2005

P766 Nonparametric statistics

14

---

---

---

---

---

---

---

---

---

---

## Summary

Attitude	Age Group	Age Category
5	Over 30	0
0	Under 30	1
4	Over 30	0
1	Over 30	0
1	Under 30	1
2	Over 30	0
3	Under 30	1
0	Under 30	1

12/9/2005

P766 Nonparametric statistics

15

---

---

---

---

---

---

---

---

---

---

## Age Group by Evaluation ( $r_{pb} = -.577$ )

12/9/2005

P766 Nonparametric statistics

16

---

---

---

---

---

---

---

---

---

---

## Kool Facts Regarding $r_{pb}$

- When the dichotomous variable is coded 0 and 1,  $r_{pb}$  is equal to the Pearson  $r$ .
- Point-biserial and  $t$ -test are closely related.
  - $r_{pb}$  looks at strength and uses all data.
  - $t$  looks at differences between means.

12/9/2005

P766 Nonparametric statistics

17

---

---

---

---

---

---

---

---

---

---

## Phi-coefficient ( $\phi$ )

- Used when
  - Both variables are dichotomous.
- The Null Hypothesis is  $H_0: \phi = 0$
- The Alternative Hypothesis is  $H_1: \phi \neq 0$

12/9/2005

P766 Nonparametric statistics

18

---

---

---

---

---

---

---

---

---

---

## Phi Example

Pass Test?

		Yes	No
		(1)	(0)
C o r r e c t	No (0)	14	9
	Yes(1)	7	16

$\phi = -.31$

12/9/2005

P766 Nonparametric statistics

19

---

---

---

---

---

---

---

---

---

---

## Chi-Square ( $\chi^2$ )

12/9/2005

P766 Nonparametric statistics

20

---

---

---

---

---

---

---

---

---

---

## One Way Chi-Square ( $\chi^2$ ) Goodness of Fit

- One group.
  - Group is grouped categorically (nominal scale).
- Null hypothesis.
  - There is no difference in the distribution of the scores across the group.
- Alternative hypothesis.
  - There is a difference in the scores across the group.

12/9/2005

P766 Nonparametric statistics

21

---

---

---

---

---

---

---

---

---

---

## Chi-square Example

The noted statistician, Dr. Anne Nova, was interested in academic preferences. She got a sample of 100 students and asked them to select the school activity they liked best from the following list.

Statistics  
Psychological Testing  
Experimental Psychology  
Recess

12/9/2005

P766 Non-parametric statistics

22

---

---

---

---

---

---

---

---

## Hypotheses

- If there is no specific prediction.
  - Null Hypothesis.  
 $H_0: f_{\text{stat}} = f_{\text{experimental}} = f_{\text{testing}} = f_{\text{recess}}$
  - Alternative Hypothesis.  
 $H_A: f_{\text{stat}} \neq f_{\text{experimental}} \neq f_{\text{testing}} \neq f_{\text{recess}}$
- Note: The researcher may specify the proportion of cases in  $H_A$ .

12/9/2005

P766 Non-parametric statistics

23

---

---

---

---

---

---

---

---

## Results

	Statistics	Experimental	Testing	Recess
$f_e$	25	25	25	25
$f_o$	40	30	20	10
$f_o - f_e$	15	5	-5	-15
$(f_o - f_e)^2$	225	25	25	225
$\frac{(f_o - f_e)^2}{f_e}$	9	1	1	9

12/9/2005

225/25

P766 Non-parametric statistics

24

---

---

---

---

---

---

---

---

## Chi-Square Evaluation

$$\chi^2 = \sum \left( \frac{(f_o - f_e)^2}{f_e} \right)$$

$$\chi^2 = 20$$

Degrees of freedom = k-1

Critical value (page 699)

$$\chi_{crit}^2 = 7.81, p < .05$$

12/9/2005

P766 Non-parametric statistics

25

---

---

---

---

---

---

---

---

---

---

## Two-Way Chi-Square Test of Independence

- Two variables.
  - People are grouped categorically (nominal scale).
- Null hypothesis.
  - There is no difference in the distribution of the scores across the variables.
- Alternative hypothesis.
  - There is a difference in the distribution of the scores across the variables.

12/9/2005

P766 Non-parametric statistics

26

---

---

---

---

---

---

---

---

---

---

## Chi-Square (r x k) Example

The noted statistician, Dr. Polly Nomial, wanted to repeat Anne Nova's study but was interested if there was an effect on the basis of gender. So she asked a sample of students to select their preference for academic activity then broke the group into male and female respondents.

12/9/2005

P766 Non-parametric statistics

27

---

---

---

---

---

---

---

---

---

---

## Nomial's Data

	Statistics	Experimental	Testing	Recess	Total
Male	15	10	10	15	50
Female	20	10	5	5	40
	35	20	15	20	90

12/9/2005

P766 Nonparametric statistics

28

---

---

---

---

---

---

---

---

---

---

### 1. Compute the expected values.

	Statistics	Experimental	Testing	Recess	Total
Male	15 $f_e = 19.44$	10 $f_e = 11.11$	10 $f_e = 8.33$	15 $f_e = 11.11$	50
Female	20 $f_e = 15.56$	10 $f_e = 8.89$	5 $f_e = 6.67$	5 $f_e = 8.89$	40
	35	20	15	20	90

$$f_e = \frac{\text{Row Total} \times \text{Column Total}}{\text{Grand Total}}$$

12/9/2005

P766 Nonparametric statistics

29

---

---

---

---

---

---

---

---

---

---

### 2. Compute $(f_e - f_o)^2$

	Statistics	Experimental	Testing	Recess	Total
Male	15 $f_o = 19.44$ $(f_e - f_o)^2 = 19.71$	10 $f_o = 11.11$ $(f_e - f_o)^2 = 1.21$	10 $f_o = 8.33$ $(f_e - f_o)^2 = 2.79$	15 $f_o = 11.11$ $(f_e - f_o)^2 = 15.13$	50
Female	20 $f_o = 15.56$ $(f_e - f_o)^2 = 19.71$	10 $f_o = 8.89$ $(f_e - f_o)^2 = 1.23$	5 $f_o = 6.67$ $(f_e - f_o)^2 = 2.79$	5 $f_o = 8.89$ $(f_e - f_o)^2 = 15.13$	40
	35	20	15	20	90

---

---

---

## 5 x 4 Contingency Table

Light Green	Light Green	Light Green	Light Green	Light Green
Dark Green	Dark Green	Dark Green	Light Green	Light Green
Dark Green	Dark Green	Light Red	Light Red	Light Red
Dark Green	Dark Green	Dark Red	Dark Red	Dark Red

12/9/2005

P766 Non-parametric statistics

34

---

---

---

---

---

---

---

---

---

---

## Types of Chi-square

### 1. One-way chi-square.

- Single variable with multiple categories.
  - Preference for car models.
  - Choice of computer models.
- Compares the distribution of scores against a standard.
  - Equal distribution of scores.
  - A priori distribution of scores.
- Referred to as 'Goodness of fit'.
- Similar to the One-way ANOVA.

12/9/2005

P766 Non-parametric statistics

35

---

---

---

---

---

---

---

---

---

---

## Types of Chi-square

### 2. Independent Samples

- Two or more variables.
  - School dropouts by ethnic group.
  - Gender of rider by order of finish in a horse race.
- Called: *Test of Independence*.
- Similar to factorial ANOVA.

12/9/2005

P766 Non-parametric statistics

36

---

---

---

---

---

---

---

---

---

---

## Types of Chi-square

3. Correlational surrogate.
  - Detect a relationship between nominal variables.
    - Single sample is measured on two variables.
    - Classified into the groups on each variable.
  - Examples.
    - Personality type by class quartile.
    - Type of drug abused by family marital status.

12/9/2005

P766 Non-parametric statistics

37

---

---

---

---

---

---

---

---

---

---

## $\chi^2$ Assumptions

1. The observations are independent; each observed frequency is generated by a different subject.
2. The observed cell frequencies are greater than 5.
